TUTU

TUTU is a wooden toy representing four trucks in one. Transformation from one type to another is done by a simple gilding system. It is possible to compile a truck, pickup, demolition or fire truck. In demolition and firefighter trucks you can rotate 360 degrees with their upper exchangeable parts. Fire truck can be transformed from demolition by changing the demolition ball for ladder. These parts are secured with the wooden pin. For another taller upper is used for the truck sliding part and the pickup truck is transformed simply by sliding out the upper part.

X CHANGE PROJECT

In collaboration with the Fiat company and the Project X Change, we were trying to develop ways to change diapers in the Fiat 500X car. Our team worked on a diaper changing table that fits perfectly on the back of the driver's seat, so that it becomes very space efficient and comfortable to use, thanks to a system of guiding fabric rails and the safety lock technology Fidlock.

In collaboration with Huy Pham, František Velenský,
Jonáš Stoklasa
